

Scale for Skid Steer & Mini Loaders

The Helper Mini On-Board Scale from VEI is a standard solution for initial recording of truck and bucket load transaction weights. The most simple and cost-effective solution combined with VEI weighing technology makes it the ideal tool for primary weighing requirements. An unrivalled start with hi-tech instrumentation providing a fully-updated situation whenever you want.

The Helper Mini On-Board Scale is designed to offer weight control during loading in order to prevent overloads and receive basic weight information - it is the ideal tool for material depots and construction companies.

With its small size, the Helper Mini On-Board Scale can be fitted in the most convenient spot in the cab allowing full visibility especially on skid steer loaders, and its easiness of use makes it user friendly in all applications.

Despite its simplicity, the Helper Mini On-Board Scale has a PC data transfer unit that can download all daily weighing transactions to VEI ipot Lite application.
